

CERTIFER HHC/DRS B.V.

*is an independent and leading service provider
in the field of inspections, (product) certifications
and measurements.*

To support the continuous growth at CERTIFER HHC/DRS we are currently looking to expand our team of certification engineers with an:

ENGINEER RAILWAY SAFETY

What can you expect from us?

The focus on safety is undoubtedly growing its presence within the world of railway vehicle manufacturing and authorization. We are therefore looking to strengthen our team of engineers who are primarily responsible for the authorization of on track machines (maintenance vehicles) or OTM in short. We do this for our clients located throughout Europe. CERTIFER HHC/DRS is a well-known name within the world of OTM authorization which provides our team of engineers with a diverse and exciting portfolio of projects.

In our company you'll find colleagues who value a fun, dynamic and good working environment which makes it possible to:

- Grow quickly in your area of expertise guided by other experienced colleagues.
- Have an open work atmosphere where you can choose your own personal development.
- Provide room for new ideas and personal initiative from each team member.

CERTIFER HHC/DRS further values:

- To provide its employees with excellent employment conditions.
- Additional benefits considered to be above average. This includes things such as a mobility budget, work-from-home arrangement and more.
- A personal approach to each employee which fits with his/her career goals and work/life balance.

What do we expect from you?

For this position within our company, we require the following qualifications:

- Bachelor (HBO) level of thinking, a technical background and interest, as well as being able to work independently.
- Has a good command of both the English and Dutch language, preferably in German too.
- Affinity with technical vehicles and risk-orientated thinking.
- Preferably knowledge regarding risk analyses, risk evaluation, management systems or auditing management systems.

Job description:

For this position the focus will be mainly on the safety side of the authorization process. This will include but is not limited to making sure that our clients follow the correct procedures to guarantee the safe manufacturing as well as the safe use of their vehicles.

You will therefore be able to:

- Perform an independent safety assessment regarding the proper application and use of risk management processes. This includes assessing the results of the followed processes as well as a safety demonstration of the system under assessment.
- Work closely with colleagues who have different areas of expertise in order to have a complete overview of possible hazards and required safety measures.
- Build trust between our different stakeholders. The outcome of your work provides other conformity assessment bodies the assurance that the applicant of the authorization process follows the proper risk assessment and management activities.
- Reporting of the results in a manner which complies with the European standard for risk assessment and management.

If you feel the ambition to join this international network of experts and expand your career possibilities then feel free to contact us.
