- "Prospective" ECM auditors

#### LANGUAGES

#### DESCRIPTION

Regulation (EU) No 2019/779 developed a system for the certification of entities in charge of maintenance of freight wagons operating on the railway network of the European Union.

The purpose of this certification scheme is to establish a framework for the harmonisation of requirements and methods for these entities in charge of maintenance across the European Union.

The extension of the scope of this regulation to other railway vehicles has already been set and will enter into force the latest by 2022. The applicable maintenance workshops require staff who have appropriate competencies in the implementation, maintenance and further development of a needs based maintenance management system on the basis of Regulation (EU) No 2019/779.

In order to be able to objectively prove these competencies, a special certification program was developed by experts according to the specifications of DIN EN ISO 17024. The certified staff will be well trained to implement, research and do further developments of a maintenance system.

#### AIMS OF THE TRAINING

- Get to know management systems and their areas of application
- Be able to interpret definitions of terms: Accreditation, certification, system, process, procedure, function, competence, information, document
- Understand maintenance functions according to Regulation (EU) No 2019/779 and be able to implement the requirements in one's own organisation
- Be able to describe, implement and check required procedures on the basis of specified regulations
- Continuously improve the organisation and its processes through the targeted use of tools and methods, or be able to make a contribution to this
- Be able to plan and conduct or support internal ECM training and audits
- Be able to convince staff to actively participate in continuous improvement
